Motivation

SAT is widely used in different domains:

- Artificial intelligence (planning, games, ...)
- Bioinformatics (haplotype inference, ...)
- Security (cryptanalysis, inversion attack on hash function)
- Computationally hard problems (graph coloring, ...)
- Formal Methods (hardware model checking, ...)

Outline

- 1 SAT overview
 - SAT basics
 - SAT and symmetries
- 2 Existing approaches
- 3 Contribution and results

SAT an example

A

B

C

Is it possible to attribute each group to a classroom?

YES! Many solutions

SAT

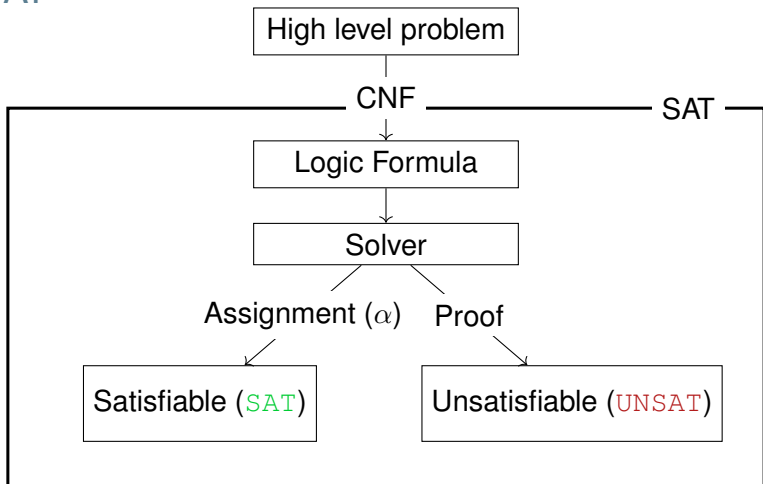

SAT

CNF Representation:

$$\underbrace{(x_1 \vee x_2 \vee \neg x_3)}_{\text{Clause with literals } x_1, x_2, \neg x_3}$$

SAT

CNF Representation:

$$\underbrace{(x_1 \vee x_2 \vee \neg x_3)}_{\text{Clause}} \wedge (\neg x_1 \vee \neg x_2) \wedge (x_2 \vee \neg x_4)$$

Formula (CNF)

SAT

CNF Representation:

$$(x_1 \vee x_2 \vee \neg x_3) \rightarrow \{x_1, x_2, \neg x_3\}$$

SAT Solving

Solving SAT formula is known to be **NP-complete** [Coo71]

Enumerative Algorithm:

- Davis, Putnam, Logemann, and Loveland (DPLL) [DLL62]
 - Boolean Constraint Propagation (BCP)
- Conflict Driven Clause Learning (CDCL) [MSS99]
 - derived from DPLL
 - clause learning

Conflict Driven Clause Learning (CDCL)

Presence of symmetries hinders the performance of the solver

Outline

① SAT overview

- SAT basics

- SAT and symmetries

② Existing approaches

- Static symmetry breaking

- Dynamic symmetry breaking

③ Contribution and results

Symmetry

$$g = \begin{pmatrix} x_1 & x_2 & x_3 & x_4 & x_5 & x_6 & x_7 & x_8 & x_9 \\ x_2 & x_1 & x_3 & x_5 & x_4 & x_6 & x_8 & x_7 & x_9 \end{pmatrix} \rightarrow (x_1 \ x_2)(x_4 \ x_5)(x_7 \ x_8)$$

A symmetry (permutation) g is a bijective function (on variables) that leaves φ invariant.

Computing symmetries of a SAT problem

CNF formula

$$\begin{aligned} & (x_1 \vee x_2 \vee x_3) \wedge (x_4 \vee x_5 \vee x_6) \wedge (x_7 \vee x_8 \vee x_9) \\ & \wedge (\neg x_1 \vee \neg x_4) \wedge (\neg x_1 \vee \neg x_7) \wedge (\neg x_4 \vee \neg x_7) \\ & \wedge (\neg x_2 \vee \neg x_5) \wedge (\neg x_2 \vee \neg x_8) \wedge (\neg x_5 \vee \neg x_8) \\ & \wedge (\neg x_3 \vee \neg x_6) \wedge (\neg x_3 \vee \neg x_9) \wedge (\neg x_6 \vee \neg x_9) \end{aligned}$$

Using symmetries to prune search space

Using symmetries to prune search space

Adds additional constraints to prune search space.

Generates symmetry breaking predicates (SBP)

- Define lexicographic order
 - Define total order on variables
 - Define minimal value
- Forbid non minimal assignment with addition of SBP

Example:

$$x_1 \leq x_2 \leq x_3 \leq x_4 \leq x_5 \leq x_6 \leq x_7 \leq x_8; \text{false} < \text{true}$$

$$g = (x_1 \ x_2)(x_4 \ x_5)(x_7 \ x_8)$$

$x_1 \leq x_2$	$x_1 \vee \neg x_2$
$x_1 = x_2 \rightarrow x_4 \leq x_5$	$x_1 \vee x_2 \vee x_4 \vee \neg x_5$ $\neg x_1 \vee \neg x_2 \vee x_4 \vee \neg x_5$
$x_1 = x_2 \wedge x_4 = x_5 \rightarrow x_8 \leq x_3$	$x_1 \vee x_2 \vee x_4 \vee x_5 \vee x_7 \vee \neg x_8$ $\neg x_1 \vee \neg x_2 \vee x_4 \vee x_5 \vee x_7 \vee \neg x_8$...

Static symmetry breaking

- Works well on many symmetric instances
- The solver can "explode" instead of being helped

Static symmetry breaking

- Works well on many symmetric instances
- The solver can "explode" instead of being helped

Static symmetry breaking

- Works well on many symmetric instances
- The solver can "explode" instead of being helped

Using symmetries to accelerate tree traversal

Using symmetries to accelerate tree traversal

Using symmetries to accelerate tree traversal

Use symmetries to deduce symmetrical facts.

Dynamic Symmetry Breaking

Different approaches:

- Symmetry Propagation (SP) [DBdC⁺12]
- Symmetry Learning Scheme (SLS) [BNOS10]
- Symmetry Explanation Learning (SEL) [DBB17]

Dynamic Symmetry Breaking

Different approaches:

- Symmetry Propagation (SP) [DBdC⁺12]
Need to keep track of active symmetries
- Symmetry Learning Scheme (SLS) [BNOS10]
- Symmetry Explanation Learning (SEL) [DBB17]

Outline

① SAT overview

- SAT basics

- SAT and symmetries

② Existing approaches

- Static symmetry breaking

- Dynamic symmetry breaking

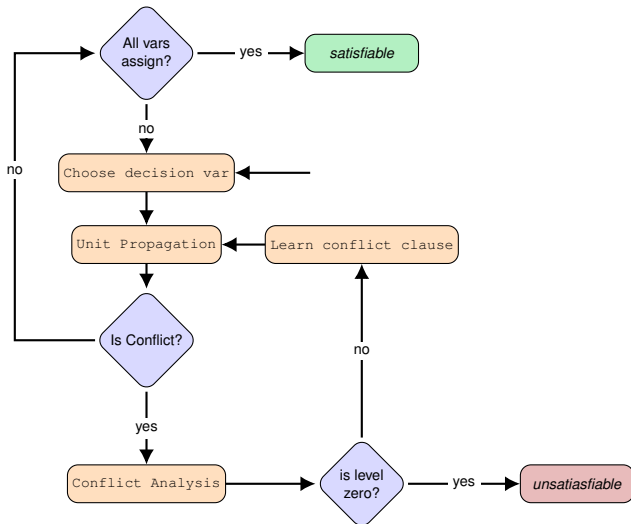

③ Contribution and results

- CDCL [Sym]

- Combination of different approaches

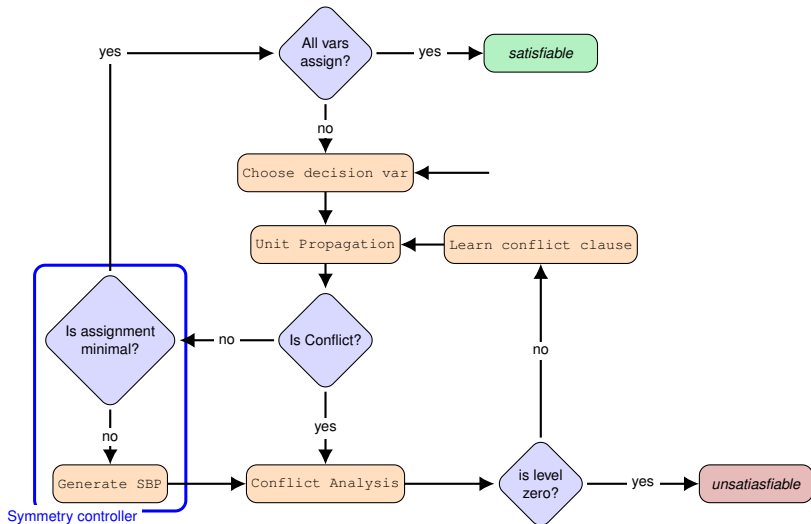

Our contribution CDCL[Sym]

Compute and inject SBP **opportunistically**, during the solving

Our contribution CDCL[Sym]

Compute and inject SBP **opportunistically**, during the solving

Symmetry status

- reducer: $g.\alpha. \prec \alpha$
- inactive: $\alpha \prec g.\alpha$
- active: *not enough information*

Efficient implementation of symmetry status

Keep track the smallest unassigned variable x :

- ① $\alpha(g.x) \leq \alpha(x)$, then g is `reducer` \Rightarrow Effective SBP (ESBP)
- ② $\alpha(x) \leq \alpha(g.x)$, then g is `inactive` $\Rightarrow g$ cannot reduce α
- ③ $\alpha(g.x)$ or $\alpha(x)$ is unassigned then g is `active`

Update whenever variables are assigned / unassigned

Example

- 1 reducer: $\alpha(g.x) \leq \alpha(x)$
- 2 inactive: $\alpha(x) \leq \alpha(g.x)$
- 3 active: $\alpha(g.x)$ or $\alpha(x)$ is unassigned

$x_1 \leq x_2 \leq x_3 \leq x_4 \leq x_5 \leq x_6 \leq x_7 \leq x_8$; false < true

$$g_1 = \begin{array}{cc} (x_2 & x_3) & (x_5 & x_6) & (x_8 & x_9) \end{array} \left| \begin{array}{l} x = x_2 \\ g.x = x_3 \\ \text{active} \end{array} \right.$$

↑

$$g_2 = \begin{array}{cc} (x_1 & x_2) & (x_4 & x_5) & (x_7 & x_8) \end{array} \left| \begin{array}{l} x = x_1 \\ g.x = x_2 \\ \text{active} \end{array} \right.$$

↑

...

$$\alpha = \{ \quad \quad \quad \}$$

Example

- 1 reducer: $\alpha(g.x) \leq \alpha(x)$
- 2 inactive: $\alpha(x) \leq \alpha(g.x)$
- 3 active: $\alpha(g.x)$ or $\alpha(x)$ is unassigned

$x_1 \leq x_2 \leq x_3 \leq x_4 \leq x_5 \leq x_6 \leq x_7 \leq x_8$; false < true

$$g_1 = \begin{array}{cc} (x_2 & x_3) & (x_5 & x_6) & (x_8 & x_9) \\ \uparrow & & & & & \end{array} \left| \begin{array}{l} x = x_2 \quad g.x = x_3 \\ \text{active} \end{array} \right.$$

$$g_2 = \begin{array}{cc} (x_1 & x_2) & (x_4 & x_5) & (x_7 & x_8) \\ \uparrow & & & & & \end{array} \left| \begin{array}{l} x = x_1 \quad g.x = x_2 \\ \text{active} \end{array} \right.$$

...

$$\alpha = \{ \neg x_2 \quad \}$$

Example

- 1 reducer: $\alpha(g.x) \leq \alpha(x)$
- 2 inactive: $\alpha(x) \leq \alpha(g.x)$
- 3 active: $\alpha(g.x)$ or $\alpha(x)$ is unassigned

$$x_1 \leq x_2 \leq x_3 \leq x_4 \leq x_5 \leq x_6 \leq x_7 \leq x_8 ; \text{ false} < \text{true}$$
$$g_1 = \begin{pmatrix} x_2 & x_3 \\ x_5 & x_6 \\ x_8 & x_9 \end{pmatrix} \mid x = x_5 \quad \begin{matrix} g.x = x_6 \\ \text{active} \end{matrix}$$
$$g_2 = \begin{array}{cc|cc|cc} (x_1 & x_2) & (x_4 & x_5) & (x_7 & x_8) \\ \uparrow & & \dots & & & \end{array} \quad \left| \quad x = x_1 \quad g.x = x_2 \right.$$

$$\alpha = \{\neg X_2, \neg X_3, X_1\}$$

Example

- 1 reducer: $\alpha(g.x) \leq \alpha(x)$
- 2 inactive: $\alpha(x) \leq \alpha(g.x)$
- 3 active: $\alpha(g.x)$ or $\alpha(x)$ is unassigned

$x_1 \leq x_2 \leq x_3 \leq x_4 \leq x_5 \leq x_6 \leq x_7 \leq x_8$; false < true

$g_1 = \begin{array}{cc} (x_2 & x_3) & (x_5 & x_6) & (x_8 & x_9) \end{array} \left| \begin{array}{l} x = x_5 \\ g.x = x_6 \\ \text{active} \end{array} \right.$

$g_2 = \begin{array}{cc} (x_1 & x_2) & (x_4 & x_5) & (x_7 & x_8) \end{array} \left| \begin{array}{l} x = x_1 \\ g.x = x_2 \\ \text{reducer} \end{array} \right.$

...

$$\alpha = \{\neg x_2, \neg x_3, x_1\}$$

g_2 generates $\omega = \{\neg x_1, x_2\}$

Experiments: benchmark

Benchmark:

- from SAT contests 2012 – 2017,
- retain only instances for which `bliss` finds significant symmetries in 1000s,
- 1350 symmetric instances (out of 3700)

Setup:

- four tools
 - MiniSat (no symmetry, baseline)
 - MiniSat + breakID (state-of-the-art symmetry SAT solver)
 - MiniSat + Shatter (state-of-the-art symmetry SAT solver)
 - **MiniSym** = MiniSat + CDCLSym (our approach)
- 5000s timeout, 8GB memory,
- includes time to compute symmetries (except for MiniSat)

Experimental results

bliss gives more generators than saucy3

Figure: cactus plot total number of instances

(a) with saucy3

	MiniSAT	Shatter	BreakID	MiniSym
PAR-2 sum	8 074 348	7 770 434	6 909 999	7 229 700
PAR-2 avg	5 981	5 756	5 119	5 355

(b) with bliss

	MiniSAT	Shatter	BreakID	MiniSym
